

The Bahamas National Statistical Institute (BNSI)

***GROSS
DOMESTIC
PRODUCT
BY ISLAND***

2015 to 2021

PREFACE

This publication introduces Annual Gross Domestic Product of the Bahamas via the Production and the Expenditure Approaches, in current (nominal) and constant (real) prices. These series increase the analytical usefulness and statistical reliability of the national accounts. The information contained in this report is some of the most sensitive leading indicators of economic conditions in The Bahamas. Users of this information will find it a meaningful addition to the usual body of information for planning and decision-making.

The data has been structured on the basis of the United Nations System of National Accounts 2008. Abbreviated definitions of the basic aggregates and an outline of the methodology employed to derive the data are also included. Persons interested in the details of the sources and methods of the estimates are advised to contact the National Accounts Section.

Nerissa Gibson
Acting Managing Director
Bahamas National Statistical Institute
(Formerly Department of Statistics)

ACKNOWLEDGEMENTS

This report is produced by the staff of the National Accounts Section of the Bahamas National Statistical Institute (BSNI) formerly the Department of Statistics.

The BNSI wishes to thank the business community, public corporations and governmental agencies for the cooperation received in the provision of the necessary data.

The Department also acknowledges the invaluable contribution of:

Ms. Nerissa Gibson (Acting Managing Director)

Ms. Leona Wilson (previous Acting Managing Director)

Mrs. Clarice Turnquest (Unit Coordinator National Accounts &
Business Establishment)

Mrs. Terah Newbold (National Accounts Supervisor)

National Accounts Staff:

Ms. Portia Tulloch (Assistant Supervisor),

Mr. Hugene Adderley, Ms. Shanya Miller, Ms. Georgina
Gabriel, Ms. Natasha Bethel

The Business Establishment Section

The Consumer Prices Section

The External Trade Section

The Labour Force Section

The Ministry of Finance

The Ministry of Agriculture

The Department of Fisheries

The Ministry of Tourism

The Central Bank of the Bahamas

The Insurance Commission

The Department of Inland Revenue

CONCEPTS & DEFINITIONS¹

The System of National Accounts (SNA): SNA 2008 consists of a coherent, consistent integrated set of macroeconomic accounts; balance sheets and tables based on a set of internationally agreed concepts, definitions, classifications and accounting rules. It provides a comprehensive accounting framework within which economic data can be compiled and presented in a format that is designed for purposes of economic analysis, decision-taking and policy-making.

The Supply and Use Tables (SUT): The central framework of the SNA 2008 contains detailed Supply and Use tables in the form of matrices that record how supplies of different kinds of goods and services originate from domestic industries and imports and how those supplies are allocated between various intermediate or final uses, including exports. These tables involve the compilation of a set of integrated production and generation of income accounts for industries – that is, groups of establishments as distinct from institutional units – that are able to draw upon detailed data from industrial censuses or surveys. The Supply and Use tables provide an accounting framework within which the commodity flow method of compiling national accounts – in which the total supplies and uses of individual types of goods and services have to be balanced with each other – can be systematically exploited. The Supply and Use tables also provide the basic information for the derivation of detailed input-output tables that are extensively used for purposes of economic analysis and projections.

Gross Domestic Product (GDP): The most frequently quoted indicator of economic performance. It provides a comprehensive and detailed record of the complex economic activities taking place within an economy and of the interaction between the different economic agents, and groups of agents that takes place on markets or elsewhere. GDP is also a production measure as it is obtained by summing the gross value added of all resident institutional units, in their capacities as producers, and adding the value of any taxes, less subsidies, on production or imports not already included in the values of the outputs, and value added of resident producers.

Gross National Product also referred to as **Gross National Income (GNI)**: is the aggregate value of the gross balances of primary income for all sectors. It is obtained by summing the balance of primary incomes of the same resident institutional units.

Gross Value Added (GVA): is defined as output (at producer's prices) less intermediate consumption (at purchaser's price) for the industries making up the GDP. The difference between gross and net value added and gross and net operating surplus is depreciation. The industrial composition of GDP follows the International Standard Industrial Classification Revision 4 (ISIC Rev.4).

Expenditure on Gross Domestic Product: Also referred to as Gross Domestic Expenditure (GDE) - constitutes all Final Expenditures by Households and Government; Investments; Exports minus Imports. Final expenditure is defined as expenditure that is not used up in the production process within the year. The differences between Gross Domestic Expenditure and Gross National Expenditure, is identical to the difference between GDP and GNP.

SOURCES AND METHODS

A: GROSS VALUE ADDED BY INDUSTRIAL ORIGIN:

Production Approach:

The economy is divided into industries such as Manufacturing, Electricity, and Construction etc., based on the International Standard Industrial Classification Revision 4. The measure is Gross Value Added which is calculated as Revenue/Sales minus Cost of Goods Sold and Intermediate Consumption, plus Taxes less Subsidies on Products.

The data is sourced from most industries through surveys conducted by the Bahamas National Statistical Institute's (BNSI) Business Establishment Section. The largest entities in the various industries are censused, while for the smaller entities a scientifically constructed sample survey is used. The data derived from questionnaires are items such as gross revenue, wages and salaries, detailed expenses incurred in carrying out the business, depreciation etc.

Information gathered from those industries not surveyed, is normally available either from administrative records or are collected by pertinent government or quasi-government agencies. These include: the Department of Inland Revenue, the Ministry of Agriculture and the Department of Fisheries, which provide agriculture and fisheries data respectively. The Financial Industry's data is obtained mainly from the Insurance Commission of The Bahamas and the Central Bank of the Bahamas. Information for Public Administration, Public Education and Public Health comes from the Ministry of Finance and the Central Bank of the Bahamas.

METHODOLOGY

The methodology for the production of the Family Island GDP estimates involved identifying an appropriate *island portion* indicator for each industry which can be used to produce a percentage share.

This percentage share is then applied to the Gross Value Added of that industry, to allow for distribution across NP, GB and the Other Family Islands.

The production of the GDP by island data became possible with the introduction of more robust administrative data in 2015, hence the commencement of the series in 2015.

The methodology will continue to evolve and improve as more viable data sources become available.

DATA SOURCES USED IN THE PRODUCTION OF THESE NUMBERS INCLUDED:

- Department of Agriculture Crop Report
- Department of Fisheries Landing Report
- Aggregated Value Added Tax data
- The Business Establishment Survey 2015 to 2020
- External Trade Statistics
- Labor Force Statistics

USES OF NATIONAL ACCOUNTS²

1. **Monitoring the behavior of the economy** by comparing and following the movement of economic flows such as production, household consumption, government consumption, capital formation, exports, imports etc.
2. **Macro-economic analysis** using econometric models to investigate the casual, functional relationships between different economic variables.
3. **Economic policy making and decision-taking** short term policy can be made based on recent behavior and the current state of the economy and a view or precise forecast about likely future developments.
4. **Harmonization between different statistical systems** by promoting consistency in terms of concepts, definitions and classifications. Revisions of these various systems are conducted in parallel with the SNA.
5. **International Comparison** which normally compare GDP or GDP per head, ratios of investment, taxes or government expenditure on GDP. These are used to evaluate the performance of similar economies, eligibility for loans, aid or other funds or conditions on which such loans, aid or funds are made available. It also determines the size of the contributions which member countries of international organizations make to finance operations of these organizations.

DATA HIGHLIGHTS:

GDP BY FAMILY ISLAND & ISLAND GROUPS SERIES

The Gross Domestic Product (GDP) by Island now includes, detailed Family Islands and Island groupings. This report shows the GDP for: New Providence, Grand Bahama, Abaco, Andros, Eleuthera, Exuma, Long Island, Bimini and Berry Islands; Mayaguana, Acklins, Crooked Island and Inagua; Cat Island, San Salvador and Rum Cay; and the Other Family Islands.

These estimates have been produced by major industrial groupings and covers the years 2015 to 2021.

This report represents a marked achievement for the Bahamas National Statistical Institute (BNSI) it as it seeks to enhance the provision of economic statistics to assist in both private and public sector decision making.

The data makes possible a more robust and relevant analysis of the various family island economies while seeking to maintain the confidentiality and integrity of the data.

Summary Findings for 2021:

Of the 2021 GDP of \$11.209 billion in nominal (current) dollars, New Providence (NP) represented \$8.405 billion (75%), Grand Bahama (GB) \$1.602 billion (14.3%) and Family Islands (FI), the remaining \$1.202 billion (10.7%).

Graph 1: Percentage Distribution of 2021 Nominal GDP by Island

A disaggregation of the Family Islands’ share shows the following contributions to the 2021 GDP performance: Eleuthera, \$204 million (1.8%); Abaco, \$346 million (3.1%); Exuma, \$169 million (1.5%); Andros, \$96 million (0.9%); Long Island, \$95 million (0.8%); Mayaguana, Acklins, Crooked Island and Inagua, \$80 million (0.7%); Bimini and the Berry Islands, \$143 million (1.3%); Cat Island, San Salvador and Rum Cay, \$34 million (0.3%); and the remaining Family Islands, \$35 million (0.3%).

Graph 2: Nominal GDP by Island 2015 -2021

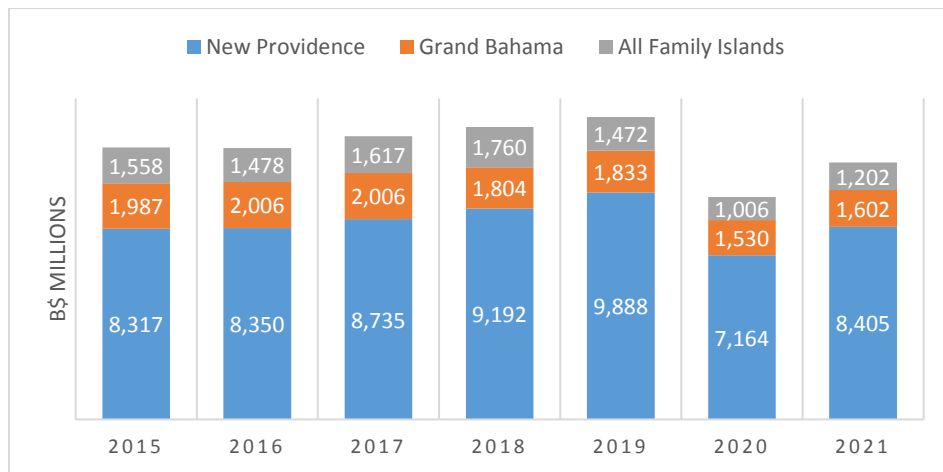

Table A: Nominal GDP by Island 2015 – 2021 (B\$ Mil)

ISLAND/YEARS	2015	2016	2017	2018	2019	2020	2021
New Providence	8,317	8,350	8,735	9,192	9,888	7,164	8,405
Grand Bahama	1,987	2,006	2,006	1,804	1,833	1,530	1,602
Abaco	510	525	564	594	394	222	346
Eleuthera	263	269	308	307	316	262	204
Exuma	191	195	215	236	198	120	169
Bimini & Berry Island	177	161	170	173	156	50	143
Andros	93	93	104	99	95	99	96
Cat Island, San Salvador and Rum Cay	90	83	98	90	89	34	34
Mayaguana, Acklins, Crooked Island and Inagua	145	58	66	144	108	114	80
Long Island	57	60	58	80	81	73	95
Other Family Islands	32	34	34	36	35	33	35

NEW PROVIDENCE:

The annual GDP trends for New Providence revealed that in 2021 there was a significant recovery when compared to 2020. The GDP for New Providence increased by 17% as the major center of domestic economic activity reopened following the adverse effects of COVID-19 Pandemic. Although the increase was substantial the level of GDP did not reach that of 2019. The high concentration of tourism activity in New Providence and Paradise Island resulted in substantial gains in the Accommodation and Food Services Industries.

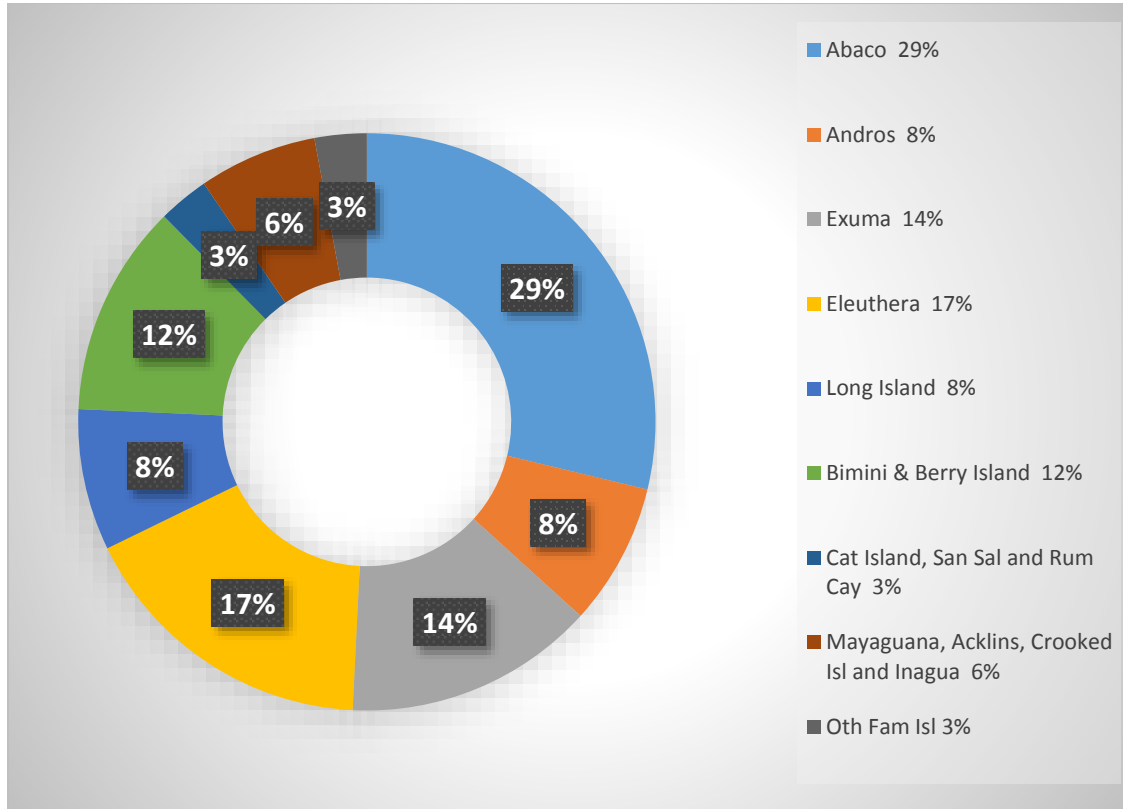

GRAND BAHAMA:

Grand Bahama’s GDP for 2021 revealed an increase of \$72.5 million (5%) when compared to 2020. The Wholesale and Retail Trade Industries was responsible for the lion’s share of this increase. Although the Grand Bahamian economy continued to recover from the devastation of both Hurricane Dorian and the adverse effects of COVID 19, some industries continue to struggle to regain the level of growth once experienced. When looking at the total economy of Grand Bahama 2021 did not show a total recovery to the levels of GDP it once achieved.

THE FAMILY ISLANDS:

Graph 3: Family Island GDP 2021 Distribution

The Family Island grouping comprises the following: Abaco, Andros, Eleuthera, Exuma, Long Island, with the remaining islands combined to maintain the confidentiality of businesses within specific industries. These remaining islands are represented in the following groups: Bimini and Berry Islands; Mayaguana, Acklins, Crooked Island and Inagua; Cat Island, San Salvador and Rum Cay; and the Other Family Islands. Graph 3 shows the proportions of each island/island group of the total \$1.202 billion in GDP contribution for the Family Islands. This approach was also taken to maintain confidentiality within the combined industrial groups.

a. ABACO

The GDP of Abaco for 2021 showed that its contribution to GDP rose by \$124 million, to represent a total of 3.1% of the total Bahamian economy. Abaco has maintained its position as the third largest island contributor to the overall economy of The Bahamas. The economic activity on this island continues to be a combination of Hurricane rebuilding efforts and increased activity in the Agriculture, forestry and fishing, Wholesale and retail trade, Motor Vehicle repairs and Transport and Storage Industries. Additionally, Accommodation, Food Services, and Arts, Other Services, Household Employment & Extraterritorial Org. industrial group still struggles to regain the level of economic activity that existed in the years prior to 2019.

b. ANDROS

Andros maintained a steady contribution to the overall Bahamas GDP, of 1%, for the years 2015 to 2021. The GDP 2017 showed the highest level in the seven year span. However, Andros was one of the few islands that experienced a growth (4%) in the year 2020. In 2021 the GDP of Andros contracted by \$2.8 million and returned to the level of GDP as it experienced in 2019.

c. ELEUTHERA

The 2021 GDP of Eleuthera showed that it did not recover to pre Pandemic levels. The combined industrial groups: Accommodation, Food Services, and Arts, Other Services, Household Employment & Extraterritorial Org. showed that the impact of COVID 19 on the tourism sector was still evident in Eleuthera. The tourism visitor arrivals for Family Islands for 2021 were much lower than years before 2020.

d. EXUMA

In 2021, Exuma contributed 1.5% of the total GDP of The Bahamas. Exuma’s GDP in 2021 grew by \$48.8 million when compared to 2020. Real Estate activities, Owner Occupied and Actual Rents was responsible for most of this increase. Although this was a sizable increase, when compared to the GDP in 2019 this was \$29 million lower.

e. LONG ISLAND

The economy of Long Island contributed 0.8% to the total economy of The Bahamas in 2021. Following the devastation on Hurricane Joaquin in 2015, the GDP of Long Island remained constant through 2017, with a sizable increase in 2018. Although like most islands in The Bahamas, Long Island’s GDP contracted in 2020 there was an increase of 30% for 2021. Long Island is one of the few islands that has shown a rebound after the Pandemic.

f. Bimini & Berry Island

Bimini and the Berry Island’s GDP increased by \$93 million in 2021 when compared to 2020. These islands represented 1.3% of the total economy of The Bahamas. The Industrial group: Real Estate activities, Owner Occupied and Actual Rents was responsible for the lion’s share of this growth as second home and Airbnb rentals are contained in this group.

g. CAT ISLAND, SAN SALVADOR AND RUM CAY

Cat Island, San Salvador and Rum Cay's GDP remained relatively low as a major hotel property closed its door in January 2021. As a result the GDP of Cat Island, San Salvador and Rum Cay increased by only 2% when compared to 2020. These islands did not experience a rebound in 2021 in fact, when compared to 2019 the GDP was \$54 million lower.

h. MAYAGUANA, ACKLINS, CROOKED ISLAND AND INAGUA

The GDP for Mayaguana, Acklins, Crooked Island and Inagua showed a reduction in 2021 when compared to 2020. The combined group of Mining and quarrying, Manufacturing, Electricity and gas, Water supply and sewerage, Construction was responsible for the lion's share of this reduction. The combined group of Public administration and defense, Social security, Education, Human health and social work, Taxes less subsidies on products also decreased.

i. OTHER FAMILY ISLANDS:

The remaining Family Island’s GDP for the period 2015 - 2021 maintained a consistent 0.3% share of total output for the Bahamian economy.

These remaining islands increased by \$2 million in 2021 when compared to 2020. This increase represented a total recovery to the level of 2019.

REVISIONS TO 2015 - 2020

FAMILY ISLAND GDP ESTIMATES

The National Accounts, as in every country, is constantly being improved as international and best practices are implemented, based on recommendations from experts in the field of National Accounts. These revisions improve the accuracy and timeliness of Gross Domestic Product (GDP).

In keeping with the Institute's Revision policy and to maintain the integrity of the series, the entire Family Island series, has been revised. This allows for an extended time series, which is necessary for proper comparability and analysis of the economy over time. It also allows for incorporation of corrections, new data sources and recommended methodological changes which would include the following:

- Balance of Payments data, as provided by the Central Bank of The Bahamas
- Tourism Visitor Arrivals data
- External Trade Statistics
- Consumer Price Indices
- Aggregated Value Added Tax data
- The Business Establishment Survey 2015 to 2020

It is important to note that the 2021 GDP data are preliminary and have been produced, based on data available up to March 2022. The Institute will release revised estimates in the next publication of National Accounts, having incorporated any revisions made by the source data providers and the Business Establishment 2021 series.
